

A photograph of a group of people in a meeting. A woman on the left is smiling and holding a tablet. A man in the center, wearing glasses and a grey blazer, is gesturing with his hands while talking. They are sitting around a wooden table with papers, pens, and glasses. The background is a brick wall with a whiteboard. The image is framed by orange and grey geometric shapes.

# Business and Technology Alignment

TechPath's IT audit service TechAlign helps increase productivity and improve team experience. It is designed to give businesses a clear understanding of where they stand when it comes to technology.

TechAlign takes a detailed look at how IT fits in with business plans and how employees utilise technology systems. It pinpoints any risks and potential cost savings, while highlighting opportunities that can transform daily operations.

## How Can TechAlign Help?

Our process involves an in-depth analysis of people, technology, and strategy. We talk not only to key stakeholders about company direction and future goals, but to team members about their daily processes and any IT challenges that may be preventing them from performing at their best.

By engaging all departments in your IT journey, you gain greater insights and more successful business outcomes.

**'When productivity at every level of the business is at its best, that is when it thrives.'**

## Who Is Suited To An IT Audit

Inefficient IT systems are one of the most frustrating problems encountered in the workplace. Reviews can often identify where minor adjustments could prevent the need for substantial expenditure.

From experience, we have found that audits provide the most value to a business when they are:

- Looking for a 'whole of business' approach from their IT partner
- Seeking a fresh approach to help them use technology more effectively
- Making strategic changes such as moving to the cloud
- Looking to identify areas of risk to ensure business continuity
- Planning budget expenditure for future projects
- Not happy with their current IT provider or technology situation

**If you are experiencing system reliability issues, high technology costs, or need an IT strategy, it could be time to consider whether TechAlign could benefit your business.**

## Why TechPath?

TechPath provides high quality IT solutions that make businesses more successful. We are passionate about understanding the needs and business goals of our customers so we can truly align with them, to help them achieve more.

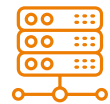

- Outstanding customer experience
- We understand business
- No lock in contracts
